

Kirk Sigmon Quoted in The Epoch Times on the Risks of AI Coding

Banner Witcoff's Kirk Sigmon was recently quoted in the Epoch Times article, *AI Can Code Faster Than Humans, but Speed Comes With Far-Reaching Risks*, sharing insight on the flaws and inaccuracies that come with AI-generated code.

Kirk says, "AI-generated code, even when it works, tends to have a lot of logical flaws that simply reflect a lack of context and thoughtfulness." He adds AI-generated code is also creating lazy habits that will have an impact on the industry's future. "Code quality has gotten way, way worse overall. One of the more concerning issues is on the academic side. If students can use AI models to generate their homework projects, then they don't tend to learn good coding practices."
