Patent Protection for Artificial Intelligence and Machine Learning

Kirk Sigmon has written an extensive guide on patenting artificial intelligence (AI), machine learning (ML), and related inventions for Lexis Nexis. This guide, intended to be a definitive reference on AI/ML patents for in-house counsel and patent attorneys across the world, provides key strategy tips for claim drafting, patent prosecution, and even explores definitional issues affecting the industry as a whole. The guide is a culmination of Banner Witcoff's specialization in AI/ML related inventions. For instance, Kirk, an IBM Machine Learning Professional, has written and prosecuted hundreds of different AI/ML patents in recent years.
